

# Project description

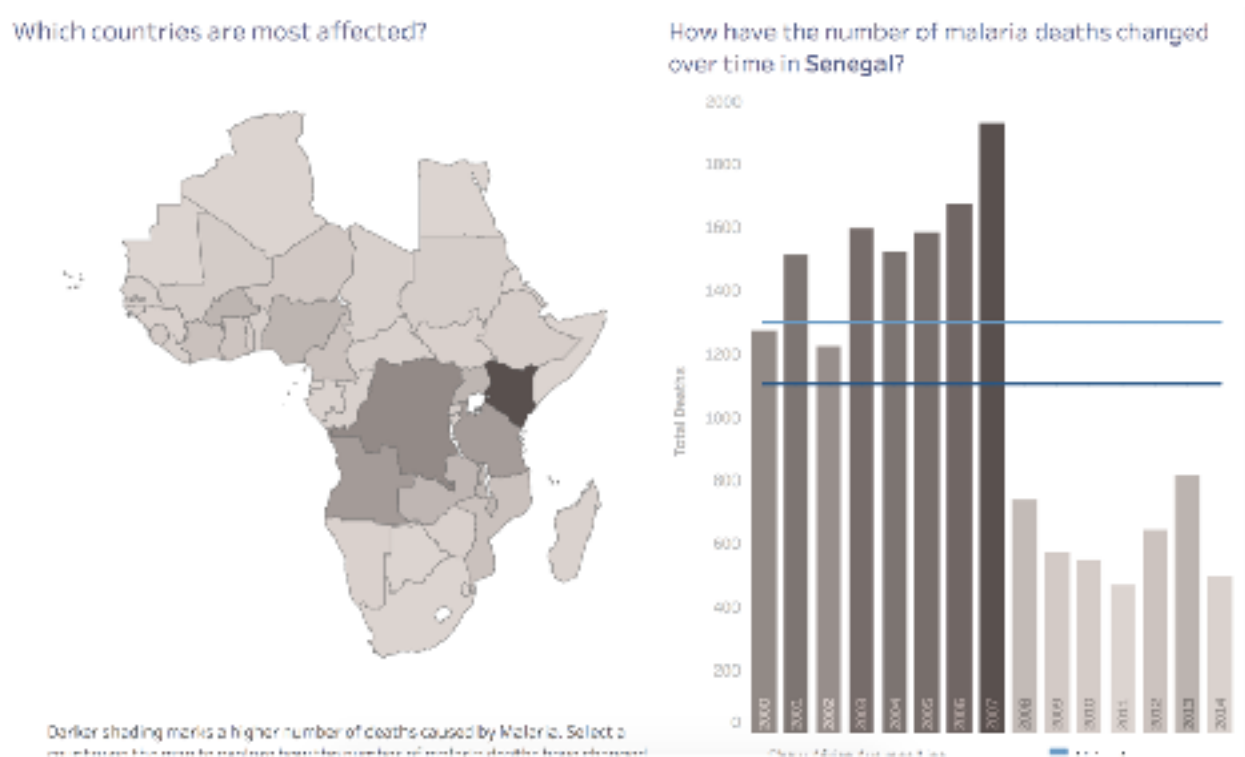

A large part of working with data is being able to interpret data visualizations and explain your insights to others. To give you some practice with this, we've selected a few Tableau dashboards for you to explore, links are below. Choose one of these dashboards, whichever one interests you the most, and find **three insights** in the visualizations. For each insight, **provide a static image** that shares what you found. Write a short report explaining each observation and how you found the information to reach your conclusion from the dashboard. Altogether (including images), your report should be 1-2 pages.

## Screen Capture

If you have not done a screen capture before, here are the instructions for a [Mac](#) or [PC](#). You can then copy and paste the image into your report.

## Example

For example one insight might look like:

“Deaths per year due to malaria in Senegal have been halved since 2007. From that dashboard, I clicked on Senegal on the map, this showed deaths due to malaria for each year from 2000 to 2014. Before 2007, there were about 1400-1500 deaths per year. After 2007, starting in 2008, deaths were reduced to about 600-700 per year.”

Submit this report as a PDF. All the images and your summary should be in **one** PDF with each summary following the image of the insight.

## Choose from these dashboards

[Madrid in Detail](#)

[Malaria in Africa](#)

[LinkedIn Top Skills](#)

If you choose to work with the LinkedIn data, you may find [this article](#) helpful for the insights that you draw.
